* Past performance provides no guarantee of future performance.

** The average change in the unit value and in the value of the benchmark over the last three, five, ten years is calculated as the geometric average of the annual changes in the unit value and changes in the value of the benchmark.

*** Standard deviation is a statistical risk indicator that shows how strongly changes in the value of a unit fluctuate compared to their average change. The standard deviation of the change in the unit value over the last three, five, ten years and since inception is the annual standard deviation of the change in the unit value for the specified period.

Fund manager's commentary

The first quarter of 2025 brought havoc to the market. Inaugurated U.S. President Donald Trump immediately took actions to control global trade flows and imposed import tariffs, at the same time reducing support for Ukraine and cutting public spending. Meanwhile, Europe has rushed to increase defense spending. These factors negatively affected expensive US stocks and induced a rise in interest rates in Europe. Since the beginning of the year, US equity prices denominated in euros have fallen by 8.6 percent, the European government bond index has fallen by 1.2 percent, while corporate bonds have risen slightly. Conservative Luminor funds have avoided the big equity market shock and the result of the first quarter was positive.

The shares and weightings of the fund's benchmark index are selected in accordance with the investment strategy set out in the rules of the fund, but the fund manager may make investment decisions at his own discretion. The value of the investment may fluctuate up and down. You may earn less than you have invested. Past performance is no guarantee of future results.
