Early loan repayment if interest rate is fixed for longer than 12-month term

Fee	
Compensation of bank's losses occurred due to early loan repayment	The fee is calculated according to the formula*
If in the credit agreement another fee has been set	This fee is calculated in accordance with the credit agreement. Bank losses (if any compensation for losses is provided in the agreement) shall be calculated according to the formula *.

*The fee is calculated by the Bank losses due to early repayment.

The fee is calculated according to the formula: $I = (\text{ratio } K * P)$,

where I – early repayment fee;

P – loan amount being repaid early;

Ratio K – value calculated by the bank which depends on the financial market interest rates change, the rest of the period to a fixed rate expiry of the credit agreement and the final repayment date.

Ratio K can be calculated using dedicated calculator on Bank's website.

*In case the interest rate under the agreement is fixed for longer than 12-month term and its validity is terminated as a result of changing the terms and conditions of the agreement, then an additional fee is applied which is equal to the early repayment fee applied to loans with interest rate fixed for longer than 12-month term (see "Early repayment fee"). In such cases, the calculation of the fee is based on the loan amount with the changed terms and conditions but not on the pre-paid loan amount.

The validity of the interest rate fixed for longer than 12-month term is considered to be terminated in the following cases:

- the interest rate fixed for longer than 12-month term is changed into the interest rate changed on a 3, 6 or 12 month basis;
- the interest rate fixed for longer than 12-month term is changed into a lower interest rate fixed for longer than 12-month term;
- the loan currency is changed;
- the effective period of the interest rate fixed for longer than 12-month term is shortened;
- the loan amount provided by the agreement is reduced (or the entire loan amount is not drawn-down).

Example of the annual rate calculation on the overall credit price (Visa Classic)

If the Bank issued EUR 1,500 credit in the payment card account for 36 months' period, the overall amount payable by the borrower would make EUR 2,317.17 and the overall annual rate of the credit price would make 19.69%.

The calculations include the interest paid during the credit period (17% fixed annual interest rate was used for the calculation), card issue fee of EUR 3, and payment card administration fee of EUR 1.30 per month.

The overall annual rate of the credit price and the overall amount payable by the borrower is calculated assuming that the total Credit Limit is used on the Credit Limit issue day and is fully repaid on the last effective day of the agreement and the interest for using the Credit Limit is paid every month.

Example of the annual rate calculation on the overall credit price (UP credit card)

If the Bank issued EUR 1,000 credit in the payment card account for 36 months' period, the overall amount payable by the borrower would make EUR 1,542.36 and the overall annual rate of the credit price would make 19.60%.

The calculations include the interest paid during the credit period (17% fixed annual interest rate was used for the calculation), card issue fee of EUR 2, and payment card administration fee of EUR 0.80 per month.

The overall annual rate of the credit price and the overall amount payable by the borrower is calculated assuming that the total Credit Limit is used on the Credit Limit issue day and is fully repaid on the last effective day of the agreement and the interest for using the Credit Limit is paid every month.
